Tree Removal Sunshine Coast

Most people, when they think of their idyllic backyard, picture a big, shady tree taking centre stage, with kids playing in swings, or climbing its branches. They picture themselves lazing underneath in its shade, as the nice cool sea breeze rustles its leaves.

However, the reality can be quite different. Perhaps its branches grow too large, or in unexpected directions, so that it starts impacting on your property, becoming a safety hazard during the kind of summer storms the Sunshine Coast are renowned for.

It could become sick and diseased and lose its visual appeal, making your otherwise beautiful backyard a place you want to avoid.

Simply trimming a tree, might be the right answer. But what should you trim?

How do you return your overgrown tree to its original beauty?

And perhaps trimming the tree isn't enough? Maybe you really need to cut the tree back? But this is also fraught with danger as to just how far back should you cut it? Which branches need to go?

Simply hacking at the tree is never the right answer.

And what about removing a tree altogether? When is that the right option? And how would you possibly go about doing that?

These questions are precisely why you should call skilled professionals like our contractors at SC Tree Removal.

Because we know all the right ways to deal with your tree problems.

About Us

Removing, lopping or trimming trees isn't an easy job. It is not just simply hacking at a tree and hoping you get it right. Cutting or trimming a branch can have ripple effects as to the future direction of the growth of that branch. You could wound a tree, inhibiting its future re-growth, or cause the tree to grow in directions you never expected. You could even kill it, if the tree does not have the energy to recover from the cuts.

And removing a tree in its entirety is a very large and dangerous job, and not one you should consider.

All of our team of contractors at SC Tree Removal have been expertly trained and are very highly skilled and qualified in all aspects of tree trimming, lopping and removal. They are fully licenced and insured, and have years of experience dealing with jobs such as yours.

We care for our environment. We love seeing a strong tree, standing strong and proud, and we love seeing people enjoying their trees. But we know that there are times when measures need to be made. A diseased tree needs to be cut back to help stop the spread of the disease. An overgrown tree needs to be cut back to protect the lives and the property of home owners.

And sometimes a dead tree needs to be removed.

Our team of contractors take pride in their work. We believe in the goal of excellent customer services and satisfaction. We work not just to fulfil the requirements of the current job, but in the hope of a long-term relationship. Our goal is to do the job right, safely, first time, every time.

When Should I Get My Tree Removed?

Within the Sunshine Coast Council jurisdiction, in most cases, you will first need council approval to remove a tree. Certain vegetation on private land is protected from being cleared. You should view the Sunshine Coast Council site if you wish to know more.

Dead trees, however, do *not* fall under the title of 'protected vegetation' so *can* be removed without a permit.

So, how do you tell if your tree is dead?

Perform a tree scratch test. Use a knife or a fingernail to remove a small piece of bark. You want to look at the layer below the bark, at what is known as the 'cambium' layer. If this layer looks green and moist, your tree is still doing ok. If it is brown and dry, it is likely dead.

With this tree scratch test, don't remove too much bark or dig in too deep. You don't want to create too large a wound that the tree, if still alive, will struggle to heal. Also, while you can also test branches in the same way, a dead branch doesn't mean the whole tree is dead, so it is best to try the test on the trunk.

Other clues to tell you that your tree might be dying:

- Check the base of the trunk. If there is fungus growing down there, that could be an initial sign that there is something wrong with your tree and it could be dead.
- Have a good hard look at the tree trunk. Look for chipped or peeling bark, or vertical cracks. Severe damage indicates bad health. Old trees lose bark, but healthy bark should grow and replace it. If there are large patches of barkless trunk, this is another indication of something being wrong.
- Dead or hanging branches in the upper crown of the tree.
- The tree might be leaning to one side. This might be because the roots have become damaged and are unable to support the weight of the tree.
- You might also find shoots at the base of the trunk, which could be another indication the root structure is weak.

If you notice any of these problems, then it is definitely time to call us in. We will check you tree and if it is indeed dead, we will remove it.

One further note about tree removal and permits. A very good reason for wanting to remove a tree is because the tree is dangerous to your property, your family or the people of the community. If you can show some evidence that a tree may pose a threat to your property, family or community, this will help you get approval to remove it from the council.

What is Tree Lopping and How Does It Differ To Trimming/Pruning?

Both these methods relate to how the tree is to be cut back. Tree lopping is a far more drastic procedure, and relates to cutting branches back to stubs, eradicating branches that are not essential to the growth of the tree, or cutting the tops off the tree.

Tree loppings are done for a number of reasons. Sometimes they are aesthetical i.e. the tree has grown too large and obstructs a homeowner's view, and sometimes it is done to reduce hazards, like eliminating branches that could become dangerous objects if blown down during storms.

Tree lopping can be dangerous, both to the person performing the operation and to the tree itself. A lopping done wrong can cause irreversible damage to the tree and should be done as few times as possible.

Lopping also requires far more dangerous equipment, and should really be undertaken by professionals who both know how to use the equipment and can ensure the health of the tree, as well.

Tree Trimming and Pruning are far more delicate operations, and are often done to ensure the tree remains beautiful, healthy and yields great quality fruits and flowers. Both tree trimming and tree pruning need to be undertaken by people who understand the tree's biology and realise that each cut can change the growth course of the tree.

Tree Pruning usually involves removing infected, diseased or overgrown branches to ensure the health of the entire tree is improved, while Tree Trimming, as the name might imply, involves trimming back the tree to promote a clean look and a tree that is more organised and aesthetically pleasing.

Whatever service you require, our expert arborist will be able to help you make the right decisions.

What Is The Difference Between Stump Grinding and Stump Removal?

Not only does SC Tree Removal deliver a tree removal service, we also deliver a stump grinding service and a stump removal service. A tree removal service does not remove the stump as that is a difficult feat all on its own.

Put simply, Stump Grinding uses a machine called a stump grinder. This machine grinds the stump to below the ground level, leaving behind fine sawdust. The root system, however, still remains in the ground.

A Stump Removal, as the name might suggest, removes the entirety of the stump, roots and all.

Should I Have My Stump Ground Down or Removed?

As you can probably guess, the answer is 'it depends'. If you are unsure of whether the stump should be ground down or removed, please ask us, and we will advise you.

Stump Removals are more difficult to perform, takes more time, requires more equipment and is more costly than Stump Grindings.

Stump Grindings, though, is a far easier exercise. Following a stump grinding, you are not left with a massive hole that you would then have to fill up, as you would with a Stump Removal. However, since the root system remains intact, there is a chance of sprout regrowth from the root, as the root is left to decay.

OUR SERVICES

Tree Removal

Tree removal is the name of our website, and the name of our game. If you have a dead, sick or diseased, or damaged tree and need it removed, call us.

Whatever the size of the tree, we can remove it. Don't wait until that dead, or sick looking tree falls over in the next big storm. Choose the safer option and have it removed by us.

If you also require the stump to be removed, please indicate that also when you call or use the instant free quote form.

Tree Lopping

Tree Lopping may be drastic, but it might be required. Disease might have taken control of your tree, and it needs to be cut back; pests and insects might have taken hold and the tree is struggling to grow as an effect; certain parts of your tree might not be getting enough sunlight to thrive while other parts hog it all; other trees in your yard might be struggling because of the size of the bigger tree.

Whatever the reason, call us to have your tree lopped. Done wrong, lopping can be dangerous for both you and the tree.

So, call us, and our contractors will advise you as to whether lopping is required, and if so, will safely perform the task for you.

Tree Pruning and Trimming

Pruning your tree removes diseased and infected branches that can be stifling the growth of your tree. Pruning can also keep your tree from shedding into your gutters or interfering with overhead electrical lines.

Trimming your trees keeps your tree looking healthy and strong, and can improve the look of your yard and increase property value. Trimming your trees can also protect your property by removing branches that could be dangerous come storm season.

As both pruning and trimming your trees can cause problems when done incorrectly, you need to call people who know and love trees and understand the consequences of each and every action.

At SC Tree Removal, our arborists understand trees, and understand what makes a tree thrive. Call us for a free quote, or fill in the free quote form and one of our friendly staff will call you.

Stump Grinding and Removal

When tree stumps are left behind they can become health hazards, particularly around children or at night.

Tree stumps can also grow things like fungi, which, if eaten, can be dangerous to pets and small children.

So, the question becomes, should you grind the stump down to the ground, leaving the roots behind to decay, or remove the stump and roots altogether.

Call us and we can advise you on the best options for your individual situation.

There are a lot of Tree Removal companies out there servicing the Sunshine Coast and its surrounding areas. We know what you want from your tree removal company are people that are not only highly-skilled, experienced and completely professional, but also fast, reliable, friendly and trust-worthy.

At SC Tree Removal we strive to build long-term relationships with our customers. We wish to be your Tree Removal company not just for the current job, but far into the future as well, and this can only happen if we prove ourselves to be the skilled, reliable, trust-worthy company we know we are.

Give us a call today and talk with one of our professional arborists today.
